

v17.54.1 Backend Support Update — Report

Date: 2026-05-25

Commit: 0176b06

Railway:  Deployed — health check returns v17.54.1

Problem

The Pine Script hotfix changed version to v17.54.1, but the entire backend/frontend/templates stack still referenced v17.54. The health check, dashboard, settings page, and alert templates all showed the old version.

Solution

Updated **94 version references** across **15 files** in the full stack:

Files Modified

Backend (Python)

File	Changes	Critical Fix?
src/oie_processor.py	27 replacements + line 263 logic fix	 YES — changed <code>version == "v17.54"</code> to <code>version.startswith("v17.5")</code> for backward compat
src/webhook_server/routes.py	4 replacements (health check version, comments)	Health check now returns v17.54.1
src/database.py	4 replacements (migration comments)	Comments only
src/decoders.py	1 replacement (docstring)	Comments only
src/oie_database.py	1 replacement (default version)	
app.py	1 replacement (startup log message)	

Templates (Jinja2/HTML)

File	Changes
templates/base.html	2 replacements (page title, nav badge)
templates/dashboard.html	1 replacement (page title)
templates/settings.html	16 replacements (alert examples, webhook templates)

Frontend (Next.js/TypeScript)

File	Changes
tradex-frontend/app/layout.tsx	3 replacements (title, nav, footer)
tradex-frontend/app/page.tsx	3 replacements (description, Pine version display, decode ref)
tradex-frontend/app/settings/page.tsx	12 replacements (alert examples, version text)
tradex-frontend/lib/api.ts	1 replacement (API client comment)

Scripts & Docs

File	Changes
scripts/test_webhook.py	15 replacements (test payloads, descriptions)
DEPLOYMENT.md	3 replacements

Critical Logic Fix

`src/oie_processor.py` **line 263** — The version check for v17.54+ payload normalization:

```
# BEFORE (broken – rejects v17.54 payloads after update):
if version == "v17.54.1" and "alert" in payload:

# AFTER (correct – accepts both v17.54 and v17.54.1):
if version.startswith("v17.5") and "alert" in payload:
```

This ensures **backward compatibility** — any existing TradingView alerts still sending `"version": "v17.54"` will continue to work.

Deployment Verification

Health Check

```
{"service": "SMC Performance Tracker", "status": "ok", "version": "v17.54.1"}
```

Webhook Tests

Test	Version	Alert	Symbol	Status	Opp ID
v17.54.1 payload	v17.54.1	A+ SNIPER BUY	BTCUSD	✔ 200	#1
v17.54.1 payload	v17.54.1	RETRACE LONG	GBPUSD	✔ 200	#2
Backward compat	v17.54	A+ SNIPER SELL	EURUSD	✔ 200	#3

All three tests passed — both v17.54.1 and v17.54 payloads are processed correctly.

Version Support Matrix

Payload Version	detect_version() Returns	Processing Path	Status
v17.54.1	v17.54.1	normal- ize_v17_54_payload()	✔ Supported
v17.54	v17.54.1 (via startswith("v17.5"))	normal- ize_v17_54_payload()	✔ Backward compat- ible
v17.25	v17.25	Plot-based normaliza- tion	✔ Supported
v17.14	v17.14	Legacy normalization	✔ Supported
Compact format	compact	Direct processing	✔ Supported
