

V17.54.3 Verification Report Template

Status: PENDING — Tests not yet executed

Branch: hotfix/hud-tracker-v17.54.3

Commit: 43a6f9c

Test 1: 8-Hour Continuous HUD Test

Pair: USDJPY 5M (replay or live)

Duration: 8 hours continuous

Pass Criteria:

- [] HUD visible for entire duration
- [] No crashes or disappearing HUD
- [] All 21 rows render correctly (0-16 standard + 17-20 debug if enabled)
- [] No console errors (Pine Script compiler)
- [] Dynamic colors update correctly per bar

Result: __

Evidence: HUDpersistence.gif / HUD_after.png

Notes: __

Test 2: 30-Minute Dense History Test

Pairs: USDJPY 5M, EURUSD 1M

Duration: 30 minutes

Pass Criteria:

- [] Load chart with 500+ bars history — no crash
- [] Scroll rapidly through history — no out-of-range errors
- [] HUD persists after rapid scrolling
- [] Zone rendering stable during scroll

Result: __

Evidence: HUDbefore.png / test_log.txt

Notes: __

Test 3: Scroll/Reload Persistence Test

Actions: Reload chart 5x, change timeframes, return to 5M

Pass Criteria:

- [] HUD rebuilds correctly on each reload
- [] No “array out of range” errors
- [] HUD table position persists (top_right)
- [] Version badge shows “v17.54.3”

Result: __

Notes: __

Test 4: Alert/Tracker Counter Test

Method: Generate alerts via replay or live signals

Pass Criteria:

- [] `sniperTrades` increments on sniper long/short fires
- [] `totalAlertsFired` increments on ALL alert fires
- [] Counters persist across chart refresh (`var` keyword)
- [] No double-counting (deduplication still works)

Result: __

Notes: __

Test 5: Crypto Toggle Test

Pair: BTCUSD or BTCUSDT

Pass Criteria:

- [] Enable `pdCryptoMode` → `pipSize` adjusts (multiplier = 1)
- [] Disable `pdCryptoMode` → `pipSize` reverts (auto-detect via `syminfo.type`)
- [] No errors on crypto pair with toggle ON
- [] No errors on forex pair with toggle OFF

Result: __

Notes: __

Test 6: Zone Pruning Evidence

Method: Load chart with 500+ bars, observe zones

Pass Criteria:

- [] Zones older than 500 bars are pruned
- [] Maximum 10 zones per type (demand/supply)
- [] FIFO removal works (oldest zone removed first)
- [] No orphaned zone boxes on chart

Result: __

Evidence: `zoneprune_example.png`

Notes: __

Test 7: Logic Integrity Verification

Method: Diff extract of alert/H4/bias sections

Pass Criteria:

- [] No changes to `request.security()` calls

- [] No changes to `alertcondition()` message wording
- [] No changes to `alert()` JSON payload structure (only version string updated)
- [] No changes to bias threshold calculations
- [] No changes to EQ line calculations
- [] No changes to confluence scoring logic

Result: _____

Diff Evidence:

```
# Run this to extract proof:
git diff 3124db2..hotfix/hud-tracker-v17.54.3 --
smc_premium_discount_indicator_v17.54.3.pine | grep "request.security"
# Expected: only additions in new file, no modifications
```

Notes: _____

Summary

Test	Status	Result
1. 8-hour HUD	 PENDING	—
2. 30-min dense	 PENDING	—
3. Scroll/reload	 PENDING	—
4. Alert/tracker	 PENDING	—
5. Crypto toggle	 PENDING	—
6. Zone pruning	 PENDING	—
7. Logic integrity	 PENDING	—
