

# v17.54 Deployment Summary

**Date:** May 24, 2026  
**Deployed by:** Automated pipeline (GitHub → Railway)  
**Status:** ✔ **LIVE**

## Before / After

| Metric             | Before                                                     | After                                              |
|--------------------|------------------------------------------------------------|----------------------------------------------------|
| Version            | v17.25                                                     | <b>v17.54</b>                                      |
| Health Check       | <code>{"status": "ok", "version": "v17.25"}</code>         | <code>{"status": "ok", "version": "v17.54"}</code> |
| Alert Architecture | <code>alertcondition()</code> with <code>{{plot_X}}</code> | <code>alert()</code> with dynamic JSON             |
| Webhook Status     | <span>✔</span> Online                                      | <span>✔</span> Online                              |
| Auth               | API key required                                           | API key required                                   |
| Backend            | Flask/Gunicorn                                             | Flask/Gunicorn (unchanged)                         |
| Frontend           | Next.js on Vercel                                          | Next.js on Vercel (updated)                        |

## What Changed

### Alert Format (Breaking Change)

Old (v17.25) — plot-based `alertcondition()`:

```
{
  "type": "sniper_long",
  "symbol": "{{ticker}}",
  "entry_price": {{plot0}},
  "stop_loss": {{plot1}},
  "take_profit": {{plot2}},
  "version": "v17.25"
}
```

New (v17.54) — dynamic `alert()` JSON:

```
{
  "version": "v17.54",
  "alert": "A_PLUS_SNIPER_BUY",
  "symbol": "{{ticker}}",
  "timeframe": "{{interval}}",
  "price": "{{close}}",
  "message": "v17.54 A+ SNIPER BUY - Aligned with Trend. Target 1:3 RR."
}
```

## 📁 Files Updated (19 files, 2 PRs)

| File                                       | Change                                                |
|--------------------------------------------|-------------------------------------------------------|
| app.py                                     | Version string → v17.54                               |
| src/oie_processor.py                       | Added v17.54 normalizer, alert map, version detection |
| src/webhook_server/routes.py               | Health check + webhook version → v17.54               |
| src/decoders.py                            | Version header → v17.54                               |
| src/database.py                            | Migration comments → v17.54                           |
| src/oie_database.py                        | Default version → v17.54                              |
| templates/*.html (5 files)                 | All version badges + alert templates                  |
| tradex-frontend/** (5 files)               | All components + settings page templates              |
| smc_premium_discount_indicator_v17.54.pine | <b>NEW</b> — alert() architecture                     |
| DEPLOYMENT.md                              | Version references → v17.54                           |
| .gitignore                                 | Comprehensive exclusions (PR #9)                      |
| scripts/deploy.sh                          | Deploy helper (PR #9)                                 |
| scripts/verify-deploy.sh                   | Verification helper (PR #9)                           |

## 🧠 Backend Intelligence

The OIE processor now handles **three alert generations**:

- v17.54** (new): `alert` field with `A_PLUS_SNIPER_BUY`, `RETRACE_LONG`, etc.
  - Price from `{{close}}`, SL/TP auto-calculated (20 pips sniper / 30 pips retrace, 1:3 RR)
- v17.25** (legacy): `type` field with `sniper_long`, `retrace_short`, etc.
  - Prices from `{{plot_X}}` placeholders
- v17.14** and earlier: Legacy compact format

## Alert Types Supported

| v17.54 Alert       | Mapped To     | Direction |
|--------------------|---------------|-----------|
| A_PLUS_SNIPER_BUY  | sniper_long   | Long      |
| A_PLUS_SNIPER_SELL | sniper_short  | Short     |
| RETRACE_LONG       | retrace_long  | Long      |
| RETRACE_SHORT      | retrace_short | Short     |
| COUNTER_BUY        | counter_long  | Long      |
| COUNTER_SELL       | counter_short | Short     |

## Verification Results

 Health: GET /api/v1/health  200 {"version":"v17.54"}  
 Webhook: GET /api/v1/signal  200 (validation OK)  
 Auth: POST /api/v1/signal (no key)  401 (auth enforced)  
 GitHub: PR #9 merged, PR #10 merged  
 Railway: Auto-deployed on merge to main

## Rollback Plan

If issues arise, revert PR #10:

```
git revert afaf11b
git push origin main
```

## Next Steps

1. Update TradingView alerts on all monitored pairs to use v17.54 templates
2. Monitor Railway logs for successful v17.54 payload processing
3. Verify Vercel frontend auto-deploys with v17.54 references
